

Q11 Classification

ID: 15464f12481fd2057f7a8205a42e03e8

Response:

Extended abstract, extended abstarct

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2800ab155946ad01714a453f448edbae

Response:

I would prefer to hear about the study from the presentation. The abstract is the better reading material for determining if the experiment is well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 43c3004415a1e8390ac4e7df8d06a292

Response:

I would prefer the video just because abstracts can be so long to read and also have confusing words but the video was much simpler. The abstract would probably be better for determining the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ac84a9f9bf782186eb9d99d16955829e

Response:

I think I would have preferred the presentation because of the visual representation and explanation he gives. The abstract was well made but I enjoy listening to people talk about things and he did a better job of explaining to me what it was about compared to the abstract. I think the abstract would do a good job of actually showing if it was well designed though, since it basically explains everything from the beginning to the end.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: aebe272ceb1baf26b7b4c08fa3ee35cf

Response:

I would prefer the presentation. It makes a lot more sense to hear it from the experts instead of just reading a procedure on a paper. The presentation makes it easier to see if the experiment was well designed because the researcher explains in depth why some assumptions were made or why a particular technique was used.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e10940ba21e35ac5beab38226043f386

Response:

I think that I liked hearing about this study through the presentation. I thought that it was more engaging. Yet, I think that the extended abstract was more informational in looking more like a study, so that one might be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 03ddc01c8e0322900ff341a10a5a2bd6

Response:

I preferred the presentation. I felt like it easily laid out the different aspects of the experiment, in a simple way. I also felt that it was much easier to follow than the abstract presentation. In the abstract, I felt there was some unneeded information.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 103c8ad3a3979d478b0470c755d935f2

Response:

I would want to hear the presentation only because I don't like reading a lot and the presentation had more graphs and pictures to explain the procedure, but I do think the abstract has a lot more detail and goes in more depth than the presentation. So I think the best one for determining whether the experiment was well designed would be the extended abstract since it does include more details and talk about it more specifically.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 32fafb3c803648334e912180cd1956ca

Response:

I would have rather heard about it by only the presentation because it gave a me a better and clear understanding of what was taking place and the back ground to the experiment. I think that the extended abstract would be better for determining how well designed the experiment was.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 47f3d89fb773c0f3c1155891cc0207d3

Response:

Personally, I am a visual learner so I would prefer the abstract simply because it helps me pay better attention and helps me understand better. Both the abstract and the presentation show the experiment was well designed, but the presentation would be the better fit in regard to determining that. It goes into the depths of reasoning and a better explanation of results.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5947f7bf23ffea0a77ebc62e2cbe3e75

Response:

I prefer the extended abstract. This is because I can read fast and skim the text instead of listening to a boring presentation that I can't skip through. I think both are equally important to whether the experiment was well designed, but if I had to choose one or the other, I'd say the extended abstract was better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 63f9e4ea19e326f6dd531ff7b5dce118

Response:

The extended abstract, because it was a little better at giving the background information. It told us more about the experiment done at the other school, so we could gauge if ours was done to the same level of quality as the other one was. I also just found it easier to understand as a whole.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 6f46a2c2c9ba4e50f2e080415d90901d

Response:

I would like to hear the presentation. I think it is easier to understand the study when in is explained in person and not just reading about it.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 71b52a64635b7712e71223ae3e7dffa4

Response:

If I had to pick which is better I would choose the presentation. I work better with visual aids and the presentation had better support for that. I preferred the 2D models rather than the picture of the 3D provided in the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7b43cfae376e2c8682d2a4755e6057e9

Response:

I would prefer the presentation. The abstract would be better though for a more in-depth understanding.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7c395510a0ca8da0f47f21af2307af78

Response:

I would prefer the extended abstract as it is better for quickly grasping the overall idea of the study itself. I want a concise overview of the research rather than a more immersive format.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 89cc712c7c054788b8598ed68bf54a18

Response:

I would prefer the video presentation. I feel like videos usually give more detail and keep my attention longer. I am a visual learner so I like seeing people talk through the slides and see the data while also hearing about it. I better understand information this way because I lose attention when I am sometimes reading.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9f90de3209cb30a8b1948671c2f96454

Response:

Presentation, I am a visual learner and prefer video explanations over reading an article. I also feel the author of the presentation could more easily explain any confusing points rather than hoping the viewer understands what is meant through sentences in an article.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a777e403b4dd41459c34e128fb3119f1

Response:

I feel like I learn better and take in information better in a video format. Sometimes when reading professional documents or abstracts from research papers I feel as if I don't take in all the information. In the video, I liked being able to have visual representations of what is being discussed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a902d28cdfabf7832175acab25157d37

Response:

I would rather use the presentation as I am more of a visual learner and it was way more helpful giving more and better detailed information to learn from. The presentation would be better to determine if it was well designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: adf9bf646242664097560b252499d579

Response:

I would prefer the presentation, the abstract is just a huge wall of words that doesn't really feel too inviting and if you are attempting to get new random people to take the study I don't think that is where you will find luck. That being said you would then have the chance of revealing things about the study that could influence study participants behavior.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ccd7fb72d52facf853cebe6ea83140df

Response:

If I had to hear about this study through a singular mean, I would probably choose the presentation because it allowed for better incorporation of visuals. The presentation would also be better for determination of a well-designed experiment, as the visuals of things such as expected results are better portrayed through those kinds of means.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d422cdaf3d837d67e0477a5c91789b1b

Response:

Extended abstract because it is a shorter version of the presentation and sums up all the main points. I think the presentation would be better to determine whether the experiment was well designed because of all the visual aids, engagement, and verbal communication.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: da96498e91b91621bed2317f8e239fbe

Response:

I would prefer the presentation because I feel like the presentation helped me understand the experiment better and what they were trying to do/prove. The presentation was more appealing and interesting instead of just reading the extended abstract. The presentation would be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: dcf1017f0481832d93a16729d09a8096

Response:

I would prefer the presentation because the experiment was explained more in depth and I understood it easier than the extended abstract. I think the presentation would be better for determining whether the experiment was well designed as well because he went into lots of detail about how the study was set up and was very clear about all the components of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: efe13f426fb64081db04c0d634fdaca7

Response:

I really liked the presentation as it was easier for me to understand so I preferred that one. Although, the extended abstract shared more of a whole over view including start to finishing results. The presentation focused a lot on the design set up and reasoning as to why. That was just briefly touched on in the abstract. Therefore, I think the presentation is better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f4e4ce8690ad90ef0a378c46245ff3f5

Response:

The presentation was far more helpful than the abstract because it used more common terminology. Additionally, the presentation told the subjects exactly what the researchers wanted to gain from the study. The presentation also mentioned what studies in the past have shown and focused on what this study was for, rather than focusing on what the studies in the past showed and briefly mentioning the study at UNL, like the extended abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ffa40025ceea23de7f98d1dcf66a235a

Response:

The presentation has more detail and talks about all the elements and how they work. The abstract has data and the method of the test but it doesn't give much data as to why the results are the way they are.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0d09c53bf1089b906fe1a3967097be4e

Response:

If I had to choose between hearing about the study using only the extended abstract or only the presentation, I would prefer the extended abstract. It provides a summary of the project's objectives, methodology, findings, and conclusions, allowing for a quick note of the essential details. However, for determining whether the experiment was well-designed, the extended abstract might be more suitable. It offers an overview of the study's methodology and findings, providing the necessary information to assess the experiment's design and execution.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 11b6dd4f9c41494119133fec71f34553

Response:

I would definitely prefer the presentation because it makes the breakdown of the experiment a lot more understandable. I am a visual learner, so the study makes a lot more sense when someone shows pictures and explains them outloud, instead of me reading a whole bunch of words. I think the presentation makes the design of the study look a lot more interesting and appealing.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 1436e071863ca93b0aa0002988d6cba0

Response:

I prefer the presentation. I think it does a better job of being more clear and concise instead of reading a long abstract off a paper. It is easier to comprehend, especially with the pictures.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2a9e408891d3bc0d7a23a730705c4940

Response:

I would choose the presentation because it explained the results and statistics the best. While also explaining the study design and future work of this study. I felt like I got more information out of the presentation than the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2ff310c77fe9e5a7c31bb12157d6ef5b

Response:

I would probably do the presentation because I do well with words and pictures combined. For determining whether the experiment was well designed probably the extended abstract part.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3b4e4c34b0cec4202d454eb8152e99fe

Response:

I would prefer the presentation since it was much easier to understand, and I prefer videos to reading material. The abstract, however, has better information to evaluate the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4b2bd232f756a6350cd0b4bb45a9c4a3

Response:

The video was the best example of the experiment. Abstracts can get really wordy and confusing. Videos are easy to follow along.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5521b96117b480385d287bee4d215d7d

Response:

I would prefer the presentation. I prefer it because it is more thorough and offers different opinions and views on the graphs. When reading the presentation we could tell more easily if it was well constructed compared to the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 553b7271485eac748ec36e9f741caaa2

Response:

The presentation was more clear for me, I'm not good with large amounts of text as like a lot of people my age. I'd say either could be used for determining how well designed the experiment was, but the presentation was more clear.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5798139da51e9ab8b9ab4936dec038a4

Response:

I would definitely prefer the presentation, it explained things in way more detail, and also was a lot easier to understand in laymen's terms. For determining whether the experiment was well designed I think I still believe the presentation did a better job showing that the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 76081ec21e4d91f04c06ec3992a06223

Response:

I think I would prefer the presentation because it seems more digestible and easier to understand compared to the abstract. I also think the presentation would be better for determining whether the experiment was well designed because the speaker would be able to elaborate beyond the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9edca23a2ded88f53acdf0f24dfcb688

Response:

I think personally I would rather hear about the experiment from the extended abstract, while I believe that the presentation shows that this experiment was well designed. If used in the same context, I think that the abstract of the study does a fair job conveying the purpose of the experiment for people that are semi-versed in the statistics world. Whereas I would use the presentation for people who don't know much about stats.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a4f5808b998219850737d3cef005db14

Response:

I would say the presentation is easier to comprehend and understand especially for something that needs explanation. I also just enjoy the slide aspect more than reading something with more words unless its better for the comprehension of it but in this case I think the slides having the pictures with the explanation was helpful

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a6497de21b8fc43391ca1b9623646769

Response:

I would prefer the extended abstract because I am able to use my own experiences and see what is happening first hand instead of trying to learn and figure out what is happening through the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ad34fa392cc4bf5480eaff90dd963765

Response:

I would prefer the presentation. I got a lot more information from this.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b4849816ec13595dcd6c7fd939fc3a5f

Response:

I would prefer the presentation because it is better and easier to understand rather than the extended abstract. I feel the presentation would also be easier for determining if the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c2fb69d5e80d62d9c5bbb5c591318327

Response:

I think the presentation, as it was longer and contained more information, the presentation would be better for determine whether the experiment was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c5d2206cc674c402ea09896c577266fe

Response:

The presentation made more sense to me as a participant, when compared to the abstract. However, because the experiment was more thoroughly detailed in the abstract, I believe the abstract was the better option when determining design efficiency.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: cefe74e26b98bb25f162c69ade95438e

Response:

The presentation. Like I said before, I don't like to read sometimes so watching this was def. easier to follow and understand. Especially with the photos. I know the abstract had photos too but having the tables laid out while I was told how they held any significance in the study was easy to follow.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f46c2cd5bc592ee34fb5498455d8771c

Response:

In general, I think it depends on the person you are asking but personally I conceptualized the abstract better but the presentation was easier to understand/follow. I think the abstract would be better for determining whether the study was well designed. I believe this because there seemed to be more information.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0ad8d989b50dbefce044de35c4619755

Response:

I think that the video had better information even though it was tough to listen to. It has more information about the experiment than the abstract does, and I feel like it explains how the experiment was designed better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0b3246068297f2483221597c9f8660e5

Response:

I would prefer to hear from the presentation. I think the presentation did a really good job of explaining the experiment and what they were looking for with this experiment, so I think that it would be better for determining how well the experiment was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 1d9bc467681b7acda5ee565cd656a6f3

Response:

I would prefer to watch the presentation because he did a good job of explaining all of the aspects of the experiment. I think the video also does a better job of telling if the experiment was well-designed because it has actual figures used in the experiment to give the person a better judge of whether the experiment was well-designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 34e34abfdf8b962e2dfe22e7dd07b77c

Response:

I would prefer the presentation over the extended abstracts personally just because I felt like the abstract was too wordy and complicated at times to really decipher the information. I do feel like the presentation would be better for determining if it was a good study because I felt like there was more justification on why the study was being done.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 38668c8f20c6fc0c2e37b9f59abecd9e

Response:

Presentation hands down. It goes much more in depth and explains many additional details. It also describes specifically how the experiment was conducted in great detail.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4772be68c30e1b0fd89e9902fa1d5285

Response:

Personally speaking, I would rather watch the presentation because for me it is hard to read abstracts without getting lost, while with a presentation there is a little more explanation on certain things to clear up any confusion. However, sometimes I feel that a well written abstract is much more detailed on specific things and it is much easier to go back and check the facts for anyone who might try to replicate the experiment in the future.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4dcbd307bfdd64406aff21eb225670e8

Response:

I think honestly I would prefer the presentation. Typically I would say the extended study, however in this specific experiment. The presentation I feel gave a little more detail (or detail I understood just a little better).

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5c4df790835022e6909c3ea9e453c5e0

Response:

I think that the presentation would be better for me. This is because I think that it is simpler to have someone explain the ideas to me rather than me deciphering the abstract. I think that the abstract is better for determining if it was well designed because it takes a lot time and effort to comprise a good abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 65ba81fc15e5777c98e645d9147da8e9

Response:

I would prefer to hear about it from the presentation because it's more interesting to hear from. The abstract would probably be better to determine if it was well designed though.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 6c747a8127ab719a97694903c77b7614

Response:

I would prefer the presentation over the extended study. This is only because I learn better from hearing things than reading them. I think that the extended abstract had more information and detail over the presentation though.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7483b578d61e4906f4631cc584e70bfe

Response:

I think the presentation told me more than what I knew from the experiment, so I would have to say the presentation. The presentation was also better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7ecb73a770530faefc7da0a72f8a3517

Response:

I would prefer the presentation, because I tend to learn and understand things better when I have a visual representation of it in front of me. I think that the presentation is better for determining if the experiment was well designed because it compares the expected results with the actual results using a visual.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 91afb96dd9ee435cd1761ecee1411ab5

Response:

I preferred reading the abstract because it had more details on procedure as well as included research from other studies. I think the abstract showed how well the experiment was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b100843ce23fb375836a2edd5b14d008

Response:

the presentation would be better because i am more of a visual person and it would make more sense for me to really be able to and listen to what the experiment is about. This would help me determine if the experiment is well designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c5699413bea4a8fd22172480eeb5d46f

Response:

I would prefer the abstract. The abstract really explained all the elements for me. And, I think it is better to read something that watch a video because it is so easy for people to zone out and reading to me just makes it more comprehensive.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: cebe300db22ac3dff70963e6105b6f67

Response:

I much prefer the presentation because reading abstracts are incredibly boring and time consuming. Another the presentation also provided a more visual method of learning about the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: df7c7c6a8869147482e8162bd01b5a0e

Response:

With what I had prior to taking the study, I think this would be easier. I had the base information and after watching Tyler's video I just have questions and it is too much to explain something that takes not long to complete.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e25ead9b2b056360291c0e9275f8c165

Response:

I would rather the presentation, because I learn better when I have an actual representation for me to look at. I think that the presentation is a better thing for deciding if the experiment was well made because it compares the expected results with the actual results.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e6d8cbad6a2fb3e35a194d8d34d71637

Response:

I thin the presentation was better for me. Often times when reading something I get distracted so when hearing something it helps me retain it better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ea70c7368e3519f09f47ac66bf211655

Response:

Personally, if I had to hear about this study, I would prefer the presentation over the extended abstract. While the extended abstract provides useful information we can always go back to, I feel the presentation, at least for me, would be better in understanding whether the experiment was well designed because it's being directly explained in great detail by one of the designers of the experiment. Also, for me, I understand things better when they're being directly told to me, rather than reading the information in a bunch of paragraphs.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: efacf73b32f7d391344e7cb515f5806b

Response:

I like the presentation better because I also like the added visuals. I also appreciate the extra explanations that can be hard to put into writing that are included in the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f414a00c77bf47462afaf4ccdba306cd

Response:

I think I would choose the presentation because I find it to be an easier method of absorbing information. I think the presentation was better for determining whether the experiment was poorly designed because it went into more detail and had graphics to help better explain the results.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fb4aaa0c8a010e7c62cc57b9a754d6ad

Response:

I would prefer the presentation because it was much easier to follow along and understand what they were doing with this research as opposed to the abstract that was written in a much more scientific way with some terms I am not familiar with. I also think the presentation is better at keeping my attention because I am not getting confused by the language of the abstract. However, I think that the abstract was better for determining if the experiment was well designed because they discussed their methods in much greater depth than the presentation did.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4c41a07459f2ae2898bd12c07d28a0b6

Response:

I would prefer the presentation as it is nice to have the information be walked through by an informed individual. The presentation is likely better for determining whether the experiment was well designed due to it being able to provide more information in a shorter amount of time.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 6aff93e318ef6e45dc460e1984388efb

Response:

I enjoyed listening to the presentation more than I did reading the abstract. The presentation seemed more comprehensive and explained the study in easily understood language.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 72920fe63f205ab3c2bf0473f373efb0

Response:

I would prefer the extended abstract video, making it the better option for determining if the experiment was well designed. It was helpful and interesting to hear about the 3D background models and history.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 82c0ee94027c529a83a21fdd153ea6c1

Response:

I would honestly prefer the presentation because I like to see all the variables in front of me instead of taking part in the experiment when I get only a portion of the information at the time. I don't like to be a test subject which is why I prefer the presentation. The presentation would be the method to see if the experiment was well designed. All the data is in front of you at that point so it would be the ideal match for determining a well designed experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8a452c7a55f8075ca8d97e1454c3373d

Response:

I'd rather hear about the study using the presentation, because while reading the graphic, I had a difficult time understanding why this study was significant. The background on 3D versus 2D graphs was helpful to me in this regard. The abstract would likely be better for determining whether the experiment was well-designed because it has more detail in a written format.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 990b6b636830aeee376b24baed256ba4

Response:

I would rather watch the video because hearing someone describe it to me is a much better way for me to learn than just reading the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: aa4e129055d90e9457230c188cb488da

Response:

probably the presentation because it showed me the results in the way i wanted to see them

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: abf24baa18761e6fb2285da6887bd83e

Response:

I prefer the presentation because it was easier to understand, at some points I had to reread sections just because I couldn't understand what it was trying to say. The abstract was very informational, but as someone who prefers to listen, I'd choose the presentation. The abstract would have a more precise way of explaining things and just more details. I think the abstract would be better out of the two to determine whether the experiment as well designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c53b84dde0a040c6e96af305de57527d

Response:

I prefer the abstract because it is much quicker and easy to understand, because it doesn't go into as Much detail. I think that an abstract is the best way to tell if a study is well designed, the video went into more detail about the results and looking forward, which isn't always necessary for determining if a study is well-designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d5b792df2a86964081a782f4bf5f9db3

Response:

I personally prefer the abstract. As a science major with a lot of experience reading scientific papers, I can read into them and I like interpreting the studies myself.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d8bef9cb25ffee4870e8034944f4cda0

Response:

I would rather hear the extended abstract. This had more information and the video presentation was very boring.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e07f3279593693c3f23d80b9d69567ac

Response:

I feel that the presentation helped because its easier when someone talks to explain something and we can follow along. It helps because he can pause and explain things better and can go step by step.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e46c2d0a7fd4bc859d8ba27f797d3e40

Response:

If I had to hear about this study I would prefer the presentation because it is straight forward and I personally like when someone talks about it first and goes over it online. I would prefer the presentation for determining weather the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e7ba42039e7ae123d8b128dc1c7b0530

Response:

I would prefer to hear about this study strictly from the presentation. Although the abstract was detailed, I felt that the presentation did a better job of explaining the background and purpose of the experiment. Overall, I think that the presentation would be better for determining whether or not the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 18bcbda8c18230039108639be79eddae

Response:

I would prefer the presentation just because listening to someone speak like that has always helped me learn better in general, and I was a fan of the visuals and whatnot that were used in the presentation. I feel like the video just because it gives kinda a step by step and some background, and idk, i just feel like it has it all.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2fdd824ae1fb05a108c085f6610d5c0a

Response:

I prefer that abstract because it gave me more of a concise idea of why the experiment was set up the way it was and the information was easier to take in. I think the abstract gives a better way of determining if this experiment was well designed because future researchers can use the abstract to test how well designed this study is.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 33d0c605bb26584d62ba4d979bc40afd

Response:

I would prefer presentation because i'm more of a visual learner than just reading. I learn more from someone explaining it to me rather than reading something. Presentation would be better for determining whether the experiment was well designed

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 38135d2aad4c575c3dbb93936d4c9dbf

Response:

I would say the presentation, because the purpose was a little clearer. This way it clearly showed that the experiment was designed better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5466555948d17886a79808c65da0bfb1

Response:

The abstract for sure, as the presentation mainly showed the difference in bar graphs and how to digitize a 3d bar graph.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 59c75ea9a63af9236b169e49651b1845

Response:

The presentation is way more preferred to hear about this experiment. The presentation is so much easier to understand and I feel like that would also make it easier to understand if the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 66cabbf2687fb7c09436bfe586ecfcb6

Response:

I preferred the presentation more, it was easier to follow along and stay engaged. The presentation is easier to listen to and see parts of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 6c2cb0573f9619e37853e961b6f8c47e

Response:

The presentation due to it providing more of the formulas and math behind the experiment and it also provides a better background for their reasoning behind the experiment. I would say the presentation would also help the presentation seem well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 804f351fdc9a5448f6edcc20067ab6aa

Response:

The presentation since there are more visuals (images, the bar charts, models) as well as an explanation of the study design and predicted results (which were also not in the abstract). In addition, there had also been more of a background on the 3D graphics to give the participant more understanding of why the study is being conducted. This is not to say that the abstract was inadequately written, it was very extensive and informative, but in terms of having to choose one for specifically for determining whether the experiment was well designed and also for participation, I would choose the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 852c3ee3b53cce1cc65baddb4c9c6eb4

Response:

Personally, I would watch the presentation. The reason why I would say this is because it gave me more visuals so I was able to comprehend what I was going to look a. I also learn better from when I listen to somewhat talk and explain what I am about to do.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: bd8565e18b186e3eb10be1d94714059e

Response:

Personally I would prefer the presentation. I thought having someone else explain the experiment to me rather than me reading the abstract was more helpful. Personally I had to reread the abstract to try and figure out what it was saying, it felt like it was saying the same thing over and over again.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: dd32593b95d8b0e300e48d41f96458cb

Response:

I prefer the presentation because it kept my attention more and walked through the results in a way that is easy for someone not familiar with the data analysis methods used to understand. The abstract, however, is better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f032fb4b3af4c4ba8d26f6f771f72be7

Response:

I would prefer the presentation, because it seemed the best laid out and clean. I also think that the presentation would be the best for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 1b56d0c71f5ceb6b71a24370c2ee4fc5

Response:

I would definitely prefer the presentation. Having visual representation for people gives them a better understanding of the experiment overall. As well as having someone guide the viewer of the presentation through the work, allows for a connected feeling towards the experiment as we have someone talking to us instead of us reading an abstract from someone we don't know.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 29e48efc1c66fe2b635dce3f8fec9898

Response:

Probably the presentation. It is generally easier for me to understand spoken words than written words.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 41adffe05d6ce2c89b5d1d80d68d67fd

Response:

I would say the abstract since I would have liked to know the background. The abstract would also better help with how well the experiment was designed since it goes in depth.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 48b43dfcb2b5e2fee9c76623b2916d5f

Response:

Probably the abstract because its strait forward. but the presentation was and is better at explaining the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 48d36d1e6a97fb05db14c52ea9c8d378

Response:

I would much prefer the presentation over the abstract. I still was left kind of confused when I read the abstract. I feel like this video did a better job at filling me in on any questions I had.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4a1fae50c10eead4c583243e01263905

Response:

I would prefer the presentation. It would be better for determining whether the experiment was well designed because it uses more day-to-day words for better understanding even for those who don't really know statistics. Also, it helps me to visualize while listening.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 532385ccaa5607d3a789427e0a6889bf

Response:

I would choose the presentation, with visual examples shown it provides a better and easier way of explaining what the goal is and what is happening. In the abstract paper it mentions the graphs but doesn't show how to read them or what specifically to do with them. So, in that case I would choose the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 58e8634fdc1c53a8702cea9ac642aa7d

Response:

If I had to hear about this study using only one of the two I would chose the presentation, I like hearing and visually seeing what the experimenters are talking about it and I felt that I can remember and learn more from it. I think that the abstract helped determine that the experiment was well designed, but I like to hear from the people who created the experiment talking about it.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 75a86adbab024a01ac05e9b3cabf34f6

Response:

I would rather hear about this through the abstract. This is because an abstract sounds more official and scientific to me and I feel there is less bias in an abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7b1d4d2400ed60ff1583b28f80a09520

Response:

I would use the reflection because it gives a better explanation and shows us more information about the study. I believe they both have their place. I would use both to determine if it was well designed. I believe this because the abstract holds good information that needs to be seen, but also the presentation goes into depth and what they could change or do in the future.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7b8ad65e947c8d860a46e22cb216c887

Response:

I would prefer the presentation because I understand it better. Reading the abstract, I was a little confused because I don't think they mentioned the group size or how the sample group was found. In addition, the presentation had visuals and did a good job at explaining every part of the experiment in depth.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a7cc22d710d78d1c1cff41a928d75120

Response:

Truly, I have no idea. Perhaps the extended abstract would be better. I don't know which would be better for the experiment appearing well-designed. I just took an intro to stats course. I barely know what experiments are. Brother, if I was capable of judging the quality of graduate level experiments, I would not be in this class. Why are you asking undergrads this? That's what I would like to know.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a895b3e17b338e10be95a99bdccd01c4

Response:

I prefer the abstract because it provides a more detailed explanation of the study's goals and designs. Which includes specific procedures and rationale that help determine whether the experiment was well designed. For evaluating the quality of this study, having access to those details is more useful than visuals alone. The abstract also shows how the study is built off past research, giving it more credibility.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b8901d767c4f784105342fc759f077ca

Response:

I would have preferred the abstract. I find reading condensed information easier than listening to someone talk about it. However, I think the presentation is better to decide if the experiment was well designed, because it's less condensed and allows for more detail.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: cbde5c6cb875faf6d5eed3467dd884b2

Response:

If I had to choose between hearing about this study only from the abstract or only from the presentation, I would choose the presentation. I liked how the presentation explained it more, and it was more visually explained, which is helpful for me. The presentation would be better for determining whether the experiment was well designed, because it walks through every detail of it.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ce00ec11accdaaf87c6bd264670a275c

Response:

I preferred the extended abstract, personally. The extended abstract provided a lot more detail into the intended goals and structure(s) of the experiment and I believe it is more determinant of the experiment's design properties more so than the oral presentation, however, the oral presentation is a bit more palatable and easier to digest for most others, I would presume.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d3cb941b7ba972484f62fbaf3cb9808e

Response:

I'd rather hear about the study through the extended abstract. It gives all the details about how the experiment was set up, which helps me figure out if it was well done. The abstract has more of the info I'd need to decide if the study was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d64ba46ac64b0368cf033b433ff27dc3

Response:

The presentation was a better explanation. I felt as if I understood the presentation better and I know a lot of students like to skim reading rather than read the whole thing. The presentation also provided the graphs and tables of the results.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: dc5ab70b92bf8878147fc9a17fb5e118

ID: 1dc1a669d9b1bd19cf56bfafdd1f5fe6

Response:

I would rather hear about it through the presentation. They go in depth a lot more in the presentation than in the abstract. The guy also shows visuals in the presentation, therefore, It's a lot easier to see what is actually going on, rather than reading the words on the paper.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 214cd16a803703e8d1b88652f7ea1ce9

Response:

The extended abstract is better for understanding the studies design because it includes detailed methods and data. It provides a clearer basis for evaluating how well experiment was conducted.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2ee7ce477ba41c9ddf60220bd582c575

Response:

The presentation. I felt the presentation went into greater detail and was very well organized. It was all encompassing of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3164aaf21d50d98ffeb2c250c560f93c

Response:

If I had to choose, I'd prefer the extended abstract because it provides a more detailed summary of the study's objectives, methods, and results. It would also be better for determining whether the experiment was well designed, since it likely outlines the experimental setup, sample size, controls, and procedures—key details not always covered in a presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 59f0d8562af7692562509deec3bcc034

Response:

I would probably select the presentation. This guy had a cool voice and it made me want to listen to him. I do agree that people teach themselves to an extent, but I mostly did the experimental learning because I had to, not because I knew why I was taking it. I am very much a facts person, so I need a reason behind something to make me want to do it.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 617426cd82092d23f0cdbb99c14a9d34

Response:

I would prefer the presentation because I found it to be more informative and clear. It gave me a better understanding of the experiment it's self, which helped me connect with the content more easily. I think that the presentation is also more useful when evaluating whether the experiment is well designed. That said, I do think collecting data in different formats can be valuable for gaining a fuller understanding of what may be considered better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 66d0b3f8dc69ccd435eabff79a6333a0

Response:

I prefer the presentation because it can show actual results from the study rather than just the expectation of the study. Again I would like to mention I learn from results not assumptions. I understand now how this study will be used after watching the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 6709fefa9607b8381c71d7dbc38e0d83

Response:

I would much prefer to hear the presentation compared to the abstract. The presentation was very straight forward and it was easy to understand what the experiment was truly looking to examine. The abstract was hard to follow at some points, which makes it hard to hold a students attention. However, I think the abstract would be better for determining whether the experiment was well designed because of how in depth and detailed it was. The abstract was pretty much a scientific paper which would clearly be the more reliable thing to look at.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 718b5c6ec516055a73cfc33d242d7fc9

Response:

I would prefer the presentation because it goes into all the components of the study and discusses the specific results of the data and explains all the different components of the study while the abstract just gave a general overview and didn't go into the specific details of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7286418c353c3b6e28c7ac0b5d2fae92

Response:

I would prefer the presentation. This is because it breaks down some reasoning as to why they use different graphs. But what the experiment is for, and what they do to calculate their data and results. This helped inform me better to my liking.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8e27ec57fa1a607bad1b7c53baeece65

Response:

If I had to choose, I would prefer the presentation because it was more engaging and provided a clearer picture of the study's context and significance. However, the extended abstract would be better for assessing whether the experiment was well-designed, as it included more details about the methodology and theoretical basis.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 94900c094d216159daf2e13c83d5d990

Response:

I would choose the presentation over the abstract. I think the presentation was better for determining whether the experiment was well designed. We got a lot more information from the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ba2f1083d33aea02911b17ec6afb561

Response:

I would prefer the presentation as it breaks the study down a bit better for me and give you visuals as well. The extended abstract is probably better for determining whether the experiment is well designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c21ee65d59f869ccf978280760b9cd74

Response:

I think that only the presentation would be better for determining whether the experiment was well designed because Tyler emphasizing certain things that would be otherwise missed. The presentation also brings up parts of the Cleveland and McGill study which presents a more clear comparison for the two studies. This comparison makes it easier to examine the accuracy and structure of the study that was conducted.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: dc96128b0491818c907610bf0991f534

Response:

I would prefer the presentation because it explained the study in more depth and made the results easier to understand. For evaluating the study's design, the presentation is better since it includes details about methods, controls, and limitations.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e62af95e980eec3f4c340b6ad5361af6

Response:

I believe the presentation was better for learning about the experiment. The presentation was easier to understand as it was more engaging, but it also provides more data for understanding that the abstract does.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f8613d1510453af0accab084f8efc1e6

Response:

I think that I would choose the abstract because it explains why and how the experiment works. I liked this because I could go back and read it whenever I needed to. The abstract works better to understand how the experiment was designed and defends that it was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 28b7233d7c1636108da9d71a4cd4dadc

Response:

Probably the video presentation because someone is explaining the experiment. Whereas if I'm reading it, I will probably find it more boring to read about graphs.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 39e046f9e7db5e60e872a1206df793ae

Response:

I think the presentation would be better. It is explained well and has good visuals to explain what would be happening.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3a0ebf03d570094630828923e2723ac0

Response:

I would prefer the presentation. The presentation would be better for determining if the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 50e8e598cd192d01bd53a16a25358fea

Response:

The abstract would be better for understanding because it's more detailed. The presentation would be better for seeing if it was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 800d94b6be6106df843b01030d18dabb

Response:

I would prefer the extended abstract because I tend to learn best when I am reading something. When watching the presentation, I felt like I absorbed less information than when I read the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b1a94356b7c09534783af36f009d886b

Response:

I think I would prefer to hear about this study only using the extended abstract because I prefer the way the information that was in the extended abstract was presented. It included a lot of information that was included in the presentation could also be found in the extended abstract. I think that the extended abstract would also be the best for determining whether the experiment was well designed because it explained some of the errors or potential errors and where the study should be furthered.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d12aaf0ec645073043ceb470a419842b

Response:

I would prefer to watch the presentation rather than reading the abstract because I am more of a visual learner. I feel like I can determine more about the experiment through the visual representations and a human explaining the composition of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f45b77f8f752396bf41e991d1371eb5d

Response:

The presentation would be more beneficial for deciding if the experiment was well-designed because it presents more information. While that abstract is short and does not go into great detail.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f5d20bc8a1a77ee7f0295dd1a8fcfc32

Response:

I would prefer the presentation because it showed the reason for why they were doing the presentation more clearly and it was easier to follow along. It would be more beneficial for those who do not have a background in statistics as well because they can see the pictures within the presentation rather than just reading the words in the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fb28bede22059c28c3db91d6f5220b97

Response:

I think the presentation is what I would prefer. It made a lot more sense hearing someone explain it with words and graphics. I think the abstract was a little confusing to follow. I think both are good choices if you need to determine if it was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0188e54dee0f5a607753820c74e2013f

Response:

I'd rather hear about the study through the presentation because it's easier to follow especially with the includes visuals. But the extended abstract would be better for judging if the experiment was well designed since it explains the methods and details more clearly.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 036e36669f0e7e0096298bf9baa7a27b

Response:

I would prefer the presentation. The presentation gives more information than the extended abstract does and shows the experiments design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 04f50620640a2215a44a798aecfcf3c9

Response:

I think the extended abstract would be easier because it allows you to analyze words and data on your own and interpret them rather than just being told what to think. It gives a lot more room for questions to be made and answered, overall making the experiment better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0893f88d479008d4a1e76d0e882c4523

Response:

I would choose the abstract because the abstract goes in to detail on how you're doing it while you're doing it while the presentation also does the same thing but it is shortened and it doesn't really go into that much detail on why they did it in the abstract, you can look at the statistic values

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0d86b7ba3177d9001a8b3baaaf83f589

Response:

I would rather hear about the study from the presentation because it was easier to follow and had visuals. But the abstract is better if I want to know if the experiment was well designed because it's more focused and to the point.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0e2921698658e08cf851f44beb0b4a5b

Response:

I would say that the presentation is the one that I would prefer. I say this because there is someone verbally explaining the results to me which is easier to understand. Also when they speak about their results they are less likely to use the big and very specific terms which makes it easier to understand as someone who wasn't doing the research themselves.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0f3e197f7c22efb6ba75f92470151a41

Response:

I would definitely prefer the presentation. The presentation explained the study's design better and I liked how it gave visual representations. The presentation was also overall easier to understand and felt more explanatory.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 13282eb4ea53941e1ef76d5ce6215088

Response:

I would prefer the presentation to hear about this study. I feel like I am more of a listening learner rather than a reader, and I got more detailed information on the study through the presentation. The presentation is better for determining whether the experiment was well designed because they can provide more detailed limitations and/or discussion slides on the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 13cda3e05ac567cd069b06acef1cab3b

Response:

for the aspect of my own personally understanding, i would prefer the presentation. I feel as though the presentation uses a good amount of auditory explanation as well as image depictions to help make everything make better sense. on the contrary, I think the abstract would be a better way to show if the experiment was well designed

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2af76f610188a308632f8ed5743efb2f

Response:

I would choose a presentation. It is difficult for people to imagine it with just text. But if it is a video, people can know more intuitively how the experiment was designed and completed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 44353e6cf801667edfb3bc1b06bc6fe1

Response:

If I had to hear about this study only using one method, I would choose the presentation. The presentation is more in-depth and provides more detail to digest, which makes it easier to form an opinion and/or understanding of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4cb30544893c63282e3d166dd982a501

Response:

I would prefer only the presentation. I felt it kept my attention more. I think the extended abstract would be better for determining whether the experiment was well designed tho!

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 572c5843a5ff03989f84477c57ca14c0

Response:

I would prefer just the presentation. I am not good at experimenting in this way, and I like to have it laid out for me with results. Much like a thesis defense, I like the short and sweet of the how and why.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5ecae987905e6f64d077b1807903bcdd

Response:

I would prefer the presentation all the way. It explains more about what we participated in rather than the old study. He also used easier words to understand that are implemented into the extended abstract because it was a formal study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 61cccadd02ef0995f85c4668bfb68612

Response:

I would prefer the presentation. I think the presentation better explains the study as well as better shows how it was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 61d702a1157cf8f94bd6ff6c28921b23

Response:

I would prefer the presentation since I learn better from visuals. I think the abstract would be better for determining whether the experiment was well designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 784fb1373ae3926c77d3ddbe9f79717d

Response:

I liked the presentation more because the way the data was displayed was much better than the abstract. The abstract may have more information about the study design, but the presentation was more helpful for this learning experience.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 78d15dc926a8ebc4e2ec8b1878f2093c

Response:

The presentation because it showed the results and why he got the larger responses to each graphs or 3D charts. It was easy to see all the visual charts.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7b758764d4c7683f0b13f4bece23848d

Response:

I would prefer the presentation because it helped me picture everything better. I think the presentation was also better to determine if the experiment was well designed because it provided the graphs of results which the abstract was just words so if you are a visual learner it was more difficult to understand fully.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8b1e6340748b3ced57307ff8d8756dd1

Response:

I would prefer the presentation for an overview because it's easier to understand and visually engaging. However, the extended abstract would be more useful for evaluating the study's design and methodology in depth.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8ca24a00e46010f7e63f6afa3ddf8f32

Response:

I think the abstract would be better. I think that one had a little bit more information in regards to how and why the experiment was completed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 92d88198f7113e694218a93e6518cba3

Response:

If I had to hear about this study I would prefer to hear it through a presentation because it is easier to understand compared to an extended abstract. The extended abstract would be better at determining whether the experiment was well designed because it would include more detailed methods.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a2056121872371d70cae2e48178df100

Response:

I personally liked the presentation more. This was because I did have to try and figure it out on my one because someone was explaining it to me.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a708ebfceb18823c3a06d53c97e0c3af

Response:

I like the format of research papers better. I understood more from the structure of the paper. I additionally appreciate an abstract as a preface to the study. The video did go into more depth about the results of the study, but results are a lot easier for me to interpret. As the article went into methodology which I find more difficult to understand so I appreciate the longer explanation. That's why I would also say it's better for determining the experiment design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ab4bb60ced262e7c7ef941bc5c61fd1f

Response:

I would prefer the presentation. The main points I learned from the abstract was this study's comparison to a previous one. This presentation better presented the main points of this study and the importance of each variable. The presentation would better help determine if the experiment is well designed as it has more depth than the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b3e9288528465d01814aa418085f0060

Response:

A extended abstract provides a more in depth/detailed summary of data recorded from a specific study/experiment, so personally I would choose this option. The feedback that can be recovered from a extended abstract is critical for peer review, which is what most of the audiences intention is from reading/listening to this study mentioned above. This methodology provides us with significant details regarding our research questions, and how well the experiment was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b402764d354cddb60db41e8090bbc7ff

Response:

I would say the extended abstract because it provides a structured summary of study goals, methods and results which is essential for evaluation whether the experiment was well designed. Abstracts tend to include more detail about the experimental design, statistical methods and findings than a presentation typically does. However the presentation might be more engaging and easier to follow when it comes to the visual aspects like the 3D printed charts. The abstract is overall just more informative.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b463bda6c5c1ec0fa4247a8a331aff82

Response:

The video did a great job explaining the project and the purpose, making it my preferred form of communication. I think the presenter is able to convey the importance of the research, the methods, and interactions with students better in the video.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b63e8b5e316d24a9db68aacdbd8e14cc

Response:

The presentation was preferable as a test subject. I was curious to see the statistics produced. However, for general purposes the abstract was easier to pay attention to as it was a short and effective explanation whereas the video used more advanced terms and statistical vernacular I am unfamiliar with.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: bd4bc67ba965cf7abb125018de2cfaf0

Response:

I would prefer the presentation. This is because the information is delivered in a more concise and clear method. I was able to understand what the author was saying and how he was saying it.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c27f56191d01fdd74dd6fdc4bfb099f2

Response:

I'd prefer the presentation as it still covers the study's design about as well as the extended abstract but includes the some of the results. For these same reasons, I think the presentation is better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c474a3f03d60a24e5b192f7c998bb496

Response:

I think that the presentation was a better option and it wasn't too long and got through all of the important points. I think the presentation would be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ce63ac1ea2b5439b2c125e77c7735e04

Response:

For a quick grasp, I would want the more interesting and simple to follow presentation. Still, the extended abstract is superior for examining the design and rigor of the study since it includes specifics on the techniques, variables, and statistical reasoning required for validity evaluation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d3a97441696f8e2ba69268ebfe9b9bc3

Response:

I would prefer the presentation to get an engaging overview and see visual examples that make the study easier to understand. However, the extended abstract would be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e260e4fb081966fe5a17e231b94bb0e1

Response:

The extended abstract would be better for determining if the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e88c7820a2d723473dfdee815f40aa7e

Response:

I personally prefer the presentation as its easier to understand the research questions and intent of the study and explains more in depth what we were participating in. it also helped understand more about the different types of charts and graphs that we were observing and what the charts and graphs portrayed differently in a visual sense.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e963ff808ef7e383889911884922f6db

Response:

I would prefer the presentation to quickly understand the concept, since it uses visuals and real examples that make the topic easier to grasp. However, the extended abstract would be better for determining whether the experiment was well designed, because it includes more detail about the methods, sample size, and data analysis.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: eba1c91a257c17c2174305e6b4ffac12

Response:

I'd choose the presentation because it was easier to follow. But the abstract is better for checking if the study was done well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f8a57f26e2073433d648ca8e505e7b5f

Response:

I would choose the presentation because it was easy to understand.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fc968775665053b0bd362ba5dce63841

Response:

If I had to hear about this study only using the abstract or the presentation, I would probably pick the extended abstract because to me it just made more sense and was layed out a lot better in my eyes and for the way that I learn. Now, for most, I would say that the presentation was layed out decently as well, and lots of people would prefer looking at the study this way.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 045900eac90d42dd2410760b6df94157

Response:

I would prefer the abstract because it better explained the importance of the study and why it matters. I think the presentation might be better at determining how well-designed the experiment was.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0ff4bb04853864b1615569e65c442fce

Response:

The presentation went more in-depth with the topic and also explained some ideas that were not covered in the abstract. The imagery that was able to be discussed in the presentation was helpful to me since I'm a visual learner as well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 30910c0bd49d6261af199ada8c7578cd

Response:

I typically learn best through reading and find the abstract more informative so that is my preference. However, I believe most people would find the presentation more comprehensive with the visual aspect. Because the presentation specifically discusses the step by step process, I believe it is better in that regard.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 871774cdf0fdf4b7a6b3fd9380426eab

Response:

I would prefer the presentation because it gives an easier explanation as well as more of a visual answer. This helps to clear up confusion. The abstract might be a better indicator of whether the experiment was designed well or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 89686d3dca08d63535f42d75c1ea29a6

Response:

The abstract since it was more laid out and explained and broken down. Having it in writing makes an experiment make more sense since you really have to think about what's being written.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b3de734da6c4e7b02b1a9735baae4c63

Response:

I would prefer the extended abstract. This is because I think the abstract delivers the most important information. The presentation would be better for determining whether the experiment was well designed because it provides more background information on the study and the results.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: bddcfedbfbc9583fc5e71ba711d56dc7

Response:

I think I would prefer only the presentation. I think the information would be presented better through talking.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c1bc1993a7ffb35cddd8d7a0de696976

Response:

The extended abstract because I prefer a scientific presentation of information. I also like that reading can get you a little more info than a presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c8b439a5b931692e546c457e8eac999a

Response:

-Personally I am more able to understand material/information by reading it as I can connect the dots better that way. In addition, the presentation only helped with the small ‘niche’ elements but not the overall bigger picture of this study that continues to change expect for the abstract/purpose of the study itself.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e4857e6aa8424f5a553f4492413534ab

Response:

The presentation format stands as my preferred choice for learning about this study because it delivers an interactive presentation of study findings in detail. The extended abstract stands as the better choice for evaluating the experiment's design because it presents methodology and objectives in a clear and concise manner which supports critical evaluation of the study's structure.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: eba75ae47983727c64972c24f516d1af

Response:

I would prefer to hear about this study from the presentation. It provided more information on the results and application, which were the most applicable parts of the study. From a researcher's point of view, the abstract would be better for gauging the quality of the experiment, because it explained more of the methods and how the experiment was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f58c52f703aa62bc5731b3e7ba6edcc3

Response:

presentation. This explains things much clearly. I still think the presentation helps explain better in its own ways.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f92ce8bd09bef815b4e18f96cc097355

Response:

I think the presentation because it's easier to follow

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 07d78368871c389cd3032a2c023b5a98

Response:

I would prefer the abstract. I enjoy reading things and believe that I understand things better that way. I think that the abstract gives a better indication on the quality of research design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0e58066a431d31e600372bf4d0bbf300

Response:

I'd prefer the presentation since there were diagrams and pictures to help the viewers better understand the conceptual ideas that the presenters' were trying to get across. The extended abstract seemed inconvenient. Between the presentation and extended-abstract, I think that the presentation is better for determining whether or not the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 1bae15c799637f2f758f69dca78073c1

Response:

I would have preferred to hear about this study via the presentation because I think that it explains things that were also addressed in the previous Abstract, in a much simpler way whereas there were times when reading the Abstract that I felt there was terminology that was confusing/would be confusing to someone who has never taken a Stats course. I think though in terms of determining whether the experiment was well designed or not that someone should take into account the Abstract as it explains in much greater detail things that can't be explained in a short presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 216183a642d4483fb96a903c2b2325bb

Response:

I feel that the presentation was more beneficial, and easier to understand. The video was able to explain the experiment in a more reasonable and understanding fashion. It also helped explain the experiment, more in depth in comparison to the abstract that we had read through, originally.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2f4fbe1502b8a1347f919d117df541b4

Response:

I would prefer the presentation, as it gave me the most information as well as providing plenty of visuals to show me what they were saying. I feel like if I knew nothing about this study previously, the presentation would help me understand it the best.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 48d0f78d3dfc8e8cc6a2e0ae95039126

Response:

I think both platforms provide useful information in understanding the experiment. However, I think the extended abstract did a better job of emphasizing the role of 3-D vs. 2-D in depth perception and identifying the differing heights among block figures.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 56ba20b83f0cb57a4ee6019102cd040d

Response:

I like the presentation because it provides a more interesting and extensive explanation, complete with pictures and context to assist comprehend the study's approach and conclusions. However, the extended abstract is preferable for judging whether the experiment was properly planned because it presents the methods, aims, and main findings in an organized fashion. Each style has a particular function, although the abstract is more suited for assessing scientific rigor.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 60091b39058a9b92c63b0b93e449c0fb

Response:

I would prefer only the presentation. I also think that the presentation would be better for determining whether or not the experiment was well-designed. This is because the presentation made more sense to me, and I felt like it was hard to follow along in the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 945654b5b97139149879bbc2c1240937

Response:

I would prefer the presentation because I am a very visual learner. Although, i do believe reading through the abstract is the best way to determine if the experiment was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9f3ce5316d39a4ee9f4636c7136e2f73

Response:

I would prefer the presentation because I am a visual learner. I do better when I can see what's in front of me and not just read it. However, I think the abstract may be better at determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ce2e5cb873749f5f22d8eb2cf6815ea0

Response:

I would prefer to hear about the study using the extended abstract. It would be better to determine if it was well designed because it goes into greater depth about the set up for the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0b62cc5ba6d600f35a8ffbe948b26685

Response:

I would prefer the presentation for a general overview because it's more engaging and easier to follow, especially with visuals. However, the extended abstract is better for evaluating the experimental design because it includes detailed methods and rationale that support critical analysis.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0ca669374b7617e64780a2098c4ffed6

Response:

I would prefer the presentation because it clearly outlined the structure, purpose, and logic behind the study in an accessible way. However, the extended abstract would be better for determining whether the experiment was well designed, since it focused more on research methods, variables, and the implications of the findings in a concise, academic format.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 168251c3084fc22de41930c60524e052

Response:

I would prefer the presentation because it gave a clearer picture of the results, methods, and real-world implications, making it more engaging and easier to understand. However, the extended abstract would be better for evaluating whether the experiment was well designed since it explains the structure, variables, and rationale in more detail. The abstract lays out the foundation, while the presentation builds on it with outcomes and insights.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 27439a7859594b96734444a0696cee0a

Response:

If I had to hear about this study I would prefer to see the presentation. I find that the presentation is very clear and states the reasoning of the study and how it was conducted.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 67aaa5d5a7c49a7cc820158ae2ccdebf

Response:

If I had to pick just one, I'd rather learn about the study through the presentation because it's more interactive and visually clear, which helps me stay focused and grasp the main ideas. But when it comes to figuring out whether the study was actually well-designed, I think the extended abstract would be more useful. It lays out the research question, the methods used, and the reasoning behind the approach in a more detailed way. Presentations tend to summarize a lot, so they might leave out important details needed to judge the quality of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 82f6f1a7bf0c2d2ad4e1b712c35cd62f

Response:

I would prefer the presentation over the extended abstract. To me, it made the experiment feel less confusing to understand in regards to the purpose of us doing the experiment. However, because the abstract is so detailed I feel like that one would be better for determining if the experiment is well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8c51eeded9d80e8b61a47d8e3e3784ae

Response:

I would ask to see the presentation it made a lot more sense and I could physically see what was asked and why. The abstract would be better for determining whether the experiment was well designed though.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9d7ca801297c817f16cd8b3db71f9246

Response:

If I heard about this study using only the abstract or presentation, I would prefer the presentation since it had a more detailed described design of the experiment. There is something about a person speaking and explaining the information that makes the explanation of the experiment seem more well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a85c7b6fc5ae533976491e593dcac805

Response:

I would prefer the extended abstract over the presentation. To determine if the experiment was designed well I'd also say the extended abstract since it explains the experimental design and goes into detail about methods, variables, and how the study was built off of a prior research study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b30b4e357d7dba19fed39c113c601b50

Response:

I would prefer the extended abstract because it gives a good overview of the most vital information in the whole experimental process. The presentation is better for determining whether the experiment was well designed, since it explains the question at hand and every component of data collection.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e51bb6e590c18789ebd6a2bc69fb9137

Response:

I'd rather hear about the study through the presentation because it's easier to understand and more engaging. But the extended abstract would be better for judging if the experiment was well designed. since it gives more details about the methods and results

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 249fcd4da2a83e9bb604f0b00f1a035e

Response:

I would prefer the presentation, because I understand the experiment more by viewing the visuals, while also getting it explained to me. I can also rewatch it as many times as needed to understand the experiment, and it provides much more details on the experiment that we do not get by just reading the extended abstract. Personally, I think the abstract gives more specific details on the design and specifically its set up, just because it is a little more simplified, but still detailed for the set up aspect, and gives the reader exactly the information they need to know in order to determine if the experiment was well design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 334632dfa4eb1316fc845a64b78f27f0

Response:

I feel like the presentation provided a more clear and concise summary of the study. However, I may be biased in this opinion because I am more of a visual learner and hearing as well as seeing information is best for me.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3c2b7655f4878f20d1e7d3d949c64728

Response:

I would much prefer the presentation simply because I am a visual and audio learn. Others might feel differently of course. The presentation has more visuals and when more complex details are explained it is so much easier to understand.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4a8f2298afc6352ea32c19c8bddaf9bb

Response:

I found the presentation to be more informative. I have a harder time understanding the detailed text of this nature, so the visual presentation and the highlights introduced by the presenter helped me understand the material better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5db813ad7854b6edc80d8ec6076d79d5

Response:

I would say one big factor would be how useful it is in determining the importance of the results. The results are all measured in a way that can fully support the hypothesis.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7241648d92375ef260cf9fb97462a084

Response:

I would prefer the presentation because it is easier to follow along with and provides a good understanding of the study. However the abstract is nice when trying to get the fuller picture of the study as well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7f061cfead37219fa37626dd371d7b79

Response:

I would prefer the presentation. I thought it was much better for explaining the purpose of the study, as well as the methods and results.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 973905ad5ea59bb0e0b48d954ad2ee0d

Response:

I would prefer the presentation because I feel the information was laid out more detailed and better explained when compared to the extended abstract. The abstract can be hard to understand when not super familiar with the study. The presentation allowed the information to be more clear to those who are not experts and less confusing. I think the presentation would then also help more in determining whether the experiment was well designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ab0b841adef05cd85faebc89850c3272

Response:

I would choose the presentation. It gave more visual aid to the study and understanding the different graph types.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0c44b7e6b1a4ceb72d6ea5a814ea1fa7

Response:

I would prefer the presentation because it is easier for me to understand. The extended abstract would be better for looking at the design of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 104aaf35bc8aa57f6c9eb7f6dd7ab6fd

Response:

I think I would rather hear the presentation because it is easy to follow and understand. The presentation is laid out very well, and it is in a good order. Sometimes reading long articles can be hard to follow and understand.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 1dad8263857a58edd71b1eb7f5145fe

Response:

I would prefer the presentation because i am a visual learner and would rather watch a video than read an article. I retain it a little better and i can always go back and rewatch if im confused.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2897188a5ab5d498ce416b331070526a

Response:

The presentation. This is because the abstract feels much less personable and easier to follow. The abstract is probably better with determining whether the experiment was well designed

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 28f9dd5473a9a2bce06c5fc336201ce5

Response:

Personally i would choose the abstract just because i enjoy reading more than watching a presentaion, but as far as the infromation goes the abstract gives a brief, but well informed summary of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2c8896c961dca9fc1c7abd7e2182e51

Response:

I would prefer the presentation over the extended abstract. I think the presentation was all around more informative, easier to understand, and would be better for determining whether the experiment was well designed. Having a lot of backup information to support the experiment kept my interest and spiked my overall support for the conduction of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3ad23b55f619cc058df61557ee46f1fd

Response:

I prefer the presentation because it is able to cover mor specifics and limitations to the study. However, I believe the extended abstract went more into detail about the specific experiment performed and would be better to determine how well it was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 42fb60008d82bf9c56aa94fe984dffab

Response:

I think I would have preferred hearing the presentation because I found it a lot more engaging than the abstract. I think the presentation language was also a lot more digestible and used general public-friendly language the abstract was more technical. I think the abstract is still more helpful for determining how well-designed the experiment was though, since it answered questions I had after the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 46e34815c5d2d21da05447181237442f

Response:

I would prefer the full conference presentation over just the extended abstract. The presentation would provide much more detail that would help me better evaluate the experimental design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 49473c84d62f08df740136b11f30f1fd

Response:

I would prefer the presentation since I see how different the data would be when comparing bars that are in a 3-D graph and a 2-D graph. The extended abstract however provided clearer details and information about the study. This would be better when determining how well the experiment was designed. I say this because we are able to look closer at how each of the graphs was manipulated.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5030bc2fec3e6212e546ab04dec73f08

Response:

I preferred the presentation as it provided more visuals for me to understand and broke down each part of the experiment in more detail. I believe the delivery of the presentation was more geared towards those who have little understanding in statistics and I was able to observe how the experiment was designed and why. I appreciated having someone explain what each graph is and the purpose of this study and the Cleveland and McGill study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 55319bb1e0f71194d6cb2ad4b85943b4

Response:

I guess I would perceive that this study would have more relevance to the presentation as it makes me believe that this experiment is much more applicable in helping researchers learn how to teach better classes than helping the visually impaired.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5987821895f6eb505730c2f026d9052d

Response:

I would prefer the presentation. I think that maybe the abstract would be better for determining whether the design of the experiment was better because of the fact that it strictly lays out the experiment and some of what math was involved, whereas even though the presentation did that, it went more in depth about the results as well instead of just the design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 70072281209136637c32ad485dcdd294

Response:

I would prefer the presentation as it's more in-depth and provides a visual rather than the extended abstract. I also think the presentation would be better for determining whether the experiment was well designed for the same reason, it provides a visual for a visual study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 71514e60553fb9423552980bbd62efda

Response:

The think I would prefer the presentation. I thought that the presentation explained things very well and kept me interested in what was happening in the experiment. I think that the presentation would also be better for determining if the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 72a5372cff0cff4291462bc5c05a2c6e

Response:

Personally, I would've preferred the presentation as it gave a simple explanation about the experiment and what the goal of the experiment was. It gave details to what the research question was about and how the experiment was set up to find out answers to the research question.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 88329480d5fe9a826e2be2eb4c4150ce

Response:

I would want to hear about this study with only the presentation. That way, I don't feel as left in the dark about what I'm about to do and why I'm doing it. Overall, because the presentation goes more in depth, I think it would be better for determining if the experiment was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9120e4b7555eed0ea1cdd402206628b0

Response:

I would prefer the presentation because it used more visuals and I like videos better than reading. But I think the the extended abstract contained more information about the design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 98f6c8b263c1f505f04df430712457d7

Response:

I would much rather prefer the presentation again because of the visuals and the ability to have someone else explain it. When determining whether the experiment was well designed or not you would certainly have to look at the abstract and all its information.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 99731a1ce7d7d5316fe9acb20bd6242d

Response:

I would prefer the presentation better because it was someone talking and telling me the information. The presentation was also put together in a way that was easy to understand. The extended abstract would be better for how well the experiment was designed because it tells how the original study was put together.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a76bfc0c4523c29a492fb2cdd140ee0f

Response:

I would choose to only hear about this study through the presentation. It provides much better detail about how the experiment was performed and where the idea for the experiment came from. It also included many more visuals that were very useful in understanding the study procedure.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ae13fa30c15e8dbc92d19a8b633810e0

Response:

I personally would prefer the presentation. Compared to the abstract reading an abundance of information, it is more difficult to grasp the material.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b42d2adc1133497d137704d59ebe575b

Response:

I personally would prefer the extended abstract because it provides exactly what the experiment is trying to study, with extra information on how it connects to the Cleveland and McGill experiment, and how the limitations are being met. I think the extended abstract is better for determining whether the experiment is well-designed. While the presentation provides an overview of 3D background and scale, I believe that the extended abstract provides more in-depth and beneficial information for the participant to accurately navigate around the limitations that the study may have between 2D and 3D graphs.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b449920ee6bfd20e531206f41bb2a06b

Response:

I would prefer hearing about it through the presentation. This made a lot more sense to me than reading the abstract and it also included the results. The abstract would be better for determining if the experiment was well designed because it goes into depth.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b56d771fbd093b6ad0cc6cdacf7a33f2

Response:

I would say the presentation would be better to hear about, but if you were determining whether the experiment was well designed, I would rather hear the extended abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: bd4ee634234431bd3ce72ef3a88ea946

Response:

I would prefer hearing about the study using the abstract. I believe it provides more detail on the setup of the experiment, which is better for determining if it was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c09067eb3407a2bf148854deb3c12899

Response:

I would rather hear the presentation because it gave more information with more visuals. It allowed for time to talk about the results as well as the future progressions of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c343e6ba9b2ac3908d35d1af7f17aef8

Response:

An extended abstract typically provides a more comprehensive written overview of the study, including details on the research question, methodology, data collection, analysis, and results. It often includes references and citations to related literature, which can help in assessing the study's context and the soundness of the research design. This format allows for a more in-depth and critical examination of the study's methodology and the quality of the data and analysis. Presentations, on the other hand, are often limited by time constraints and may focus more on summarizing key findings and implications, potentially leaving out some of the finer details of the research design. They are valuable for providing a quick overview and for engaging an audience, but they may not offer the same level of depth and scrutiny as an extended abstract. So, if the goal is to determine whether an experiment was well designed, the extended abstract is usually the better choice for a more comprehensive and detailed assessment of the research methodology and its rigor. However, combining both the presentation and the extended abstract can provide a more complete understanding of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d2a35f64c1353edcd64dfacbb671aff0

Response:

I liked the presentation, due to the fact that it was explained through live presentation. I think this allows me to follow along much easier.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d2ae357f706b0e984bf13881c0ac145d

Response:

I would like to have heard about this from the presentation over the extended abstract. However I think that the extended abstract was more informational and provided us with more background information.

ID: d4b0dad89981f5ec916e18e797d4625c

Response:

I would prefer a presentation. I am more of a visual person and not interactive. I feel like the presentation would give a better insight on how the experiment was deigned.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: dafdc83ecd84a4ef16493c78bce403b

Response:

If I had to hear about this study I would prefer the presentation because the visual components of results helped me to better understand. However, I feel that the extended abstract provides better information for determining if the experiment was well designed because it better explains the study being replicated.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e0520b84ad0cf90b1f6eb7ffe9efe50b

Response:

Presentation, because it would provide more information than the abstract. Presentation

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e1b948e3c6062730c0dfb8fa15f010ee

Response:

I would definitely prefer the presentation because of how the information is broken down into slides. However, an extended abstract has a lot more to be picked through to determine if the experiment is designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e8205af256c701ed45755f830799f41e

Response:

If I had to hear about this study using only one source, I would prefer the video presentation. This may be because I am a visual and auditory learner, but I also had a hard time understanding what the researchers wanted us to get out of the abstract because it was so complex. With the presentation, I was able to understand step by step how the study was conducted.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ed0d993739d0f0e3da9a00f7b62a6f94

Response:

If I had to choose to hear about this study based on the extended abstract it only the presentation, I think I would prefer the extended abstract. I felt that the presentation almost made the study a little more confusing, and I like that the extended abstract is something that I was able to read on my won time at my own pace. I also feel that the abstract represents that the experiment was better designed compared tot he presentation, the abstract divides up the experiments and and explains the different sections in a more easy to understand fashion.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: eda9f322fcc0a6549c3609067c486e1a

Response:

If I had to choose between hearing about the study using only the extended abstract or only the presentation to determine whether the experiment was well designed, I would prefer the extended abstract. The extended abstract is typically a more detailed and structured written document that provides a comprehensive summary of the research methodology, key findings, and conclusions. It is designed to convey the essential aspects of the study in a concise manner, making it easier to scrutinize the study's design and key components. While presentations can be engaging and informative, they often focus on summarizing key findings and may not provide as much detail on the study's design and methodology. In a presentation, the emphasis is often on delivering a clear message to a live audience, which may not delve deeply into the study's design nuance

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fa623327353f87bdf3bf17825c8afbeb

Response:

I would prefer the presentation only. Although I think that the extended abstract would be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fa6b1e1e997bad502afa2b8d13b58fa8

Response:

Again I like the presentation better mostly because it adds a more personal touch! The abstract is probably really the best was to understand the design of the experiment. However I struggle reading that kind of material. So for a participant, the video presentation was the best.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 16f9cd79f9f0d5bc6f45163d5f876371

Response:

Personally, I would prefer the presentation to hear about the study. I thought they explained the experiment, and the process better. I thought that overall the presentation covered all topics in a very well manner, and explained just the right amount of information. The extended abstract was well written, however I do just learn better from verbal explanation. I think the extended abstract would be better for determining whether the experiment is well designed or not due to it having all the information on one document, and being able to be read quickly and provide images next to the descriptions. You can also see each aspect of the experiment on one document as well which helps determine the experiments overall design!

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2af9f52e04ed56bd5cad96f43e919e7b

Response:

I prefer hearing about this study using only the extended abstract. I think it provides a better summary.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3a1051be53169cc5cf984db08ffd55eb

Response:

I would prefer the presentation over the extended abstract. I think the abstract would give good background on the experiment but I think the presentation gives a better view on the experiment design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4847d2d69a1ab6534e0b3ea5b60eaa28

Response:

I would prefer the presentation, but the abstract would be more beneficial to see if the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 5419a394532af30a75bb58bf1255ccdd

Response:

If I had to choose, I would definitely choose the presentation for a more direct and clearer overview of the study. But the extended abstract would be better for determining whether the experiment was well-designed or not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c7512ddb02ac0804f7f28b7b6e7cbe6e

Response:

I would prefer the presentation. Either way, the questions posed seem more vague than not. I am inclined to learn and I feel like I am unable to comprehend some of the information while the majority is within the presentation and not as much in the extended abstract. To consolidate, the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f930c92c8760f398b55c1e151b0e55fe

Response:

I would go for the presentation because it's engaging and easier to follow. The extended abstract is better for evaluating the experiment's design because of the detailed summary of the methodology and results.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 188147593fbf0eb5a4be1df2ae2ca52f

Response:

I would prefer the abstract. The reason why I would prefer the extended abstract is that it went far into detail with the methodology and it brought up it's study designs and the implications that the study will for future research and pointed out how it'll adjust next time with the 3D charts are the largely negative view of them were misguided.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 433a283fb903dfcba43f810f3c265d02

Response:

I personally would prefer the presentation because it offers a more condensed and direct method of providing the information, but the abstract would offer a better explanation for the experiment. The abstract could go into more details and specifics of how the experiment was designed that the presentation could not.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 438a19869adb0af704cf4127e0b7f1eb

Response:

The presentation. The presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 48f92ccf19320b3e3b29ca8555c00e55

Response:

I would prefer the presentation. It is more detailed, and it explains the process a lot better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4bba3ff1f7c8d7a25294289a7d6ebbb8

Response:

Watching the presentation would have been better since it has a lot of the information you needed to understand the experiment. It also touch on the major subject being experimented as well as explaining it and breaking it down. I think the presentation did the job of explaining the experiment and how well it was design and how so I would've prefer the presentation over the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 813a1d0759cf41dfa0e73afefbb8ef1f

Response:

I think that I would prefer the presentation, as not only does it highlight the experiment in steps that are easy to follow, but it also does a good job in providing a conclusion to the experiment, as the abstract reflection did not. While listening to the presentation I was able to get a lot more out of it, and the explanations really helped my understanding even more.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9607aaefdd68b3d3f7762cdd61167ae5

Response:

The presentation because it explains it more clearly. The presentation would be better for determining if the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b542cb53f1e9f34a5864737aef7b180e

Response:

The presentation was much easier to understand for me because the language was explained as we went along, I also think I am a visual and audio learner so having a narrator helped. I think if you know a lot about statistics higher level the abstract could be better, but they also didn't touch on every single variable so in that sense the presentation was better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 039c34537cdaadfc29787cd4bb4ff5f7

Response:

I believe the extended abstract is the part of the experiment I would prefer. This shows how well a experiment was designed because we are given the information how the study methods were applied to the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 03b0aacf59d5ee77a38f456835f841d1

Response:

I would prefer the presentation, as it was helpful to have a visual and audio aide to the experiments explanations. It would be more helpful as an abstract, because that explains all the data in a scientific manner.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 10484dae5c854ec93ada637930049a56

Response:

I would actually probably prefer the extended abstract because I do better reading about information. I was better able to understand the purpose of the study and what the researchers were trying to accomplish. The presentation however may have done a better job at determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 17a9f2e3270138fff474f0e38c898dd6

Response:

I think that abstract would be better for the overall experiment. The abstract was more engaging and a hands on study. This allows the participants to engage in the experiment more and learn more from the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 18e63a23266e1dd011bd3de9708499a3

Response:

I prefer the spoken presentation. This is because of the visuals. Additionally, academic writing is dry so hearing someone speak the same information is always better to me. Additionally, seeing the screens from the experiment and walking through the steps was much more useful than reading those same steps in the abstract. If I were to critique the presentation I would say the speaker needed more inflection in their tones and could have spoken a bit quicker.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 1c3d01120968b40a1f13cad5edb9d0ad

Response:

I would rather learn about it from only the presentation as opposed to only the extended abstract article. I think the presentation is both better to learn about the experiment and to know if it is well designed because it is easier to understand the nuances of this experiment when someone is explaining it to you rather than just reading it from a piece of paper.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2ce4e429c087f02ad6e1a5dc2bf8e884

Response:

I would prefer the presentation. I think that it is more informative and explained the design a lot better. I also better understood the execution of the experiment and why it was done the way it was done.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2cf9966eb67919172a5be4e7cc32c2e0

Response:

Preferring the extended abstract or the presentation depends on personal learning style. However, the extended abstract is generally better for determining whether the experiment was well designed, as it likely contains more detailed information about the methodology, controls, and statistical analysis compared to a presentation, which might focus more on summarizing results and broader implications.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 38cdff54232f2120aee78d614966e9b4

Response:

The extended abstract presents important components of the study, including the research question, objectives, methodology, findings, and implications. It provides a more thorough and organized summary of the work.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3b03ff2e05dc493aa9dc782a864f354d

Response:

I would prefer the presentation. The presentation had more visual aids involved the hearing the instructions once more, I preferred it over the abstract since it was a bit more difficult to visualize. I believe the presentation was able to go more in-depth too in a clearer manner compared to the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3c9ef1382c48be73ba870e5a3eb355e6

Response:

I would prefer the presentation. It is easier to follow and understand. I think the abstract is better for determining whether it was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4056afe544a04c3a1e9d45cbd6986d46

Response:

I would have preferred the presentation due to the consumpabililty of the material. As it is much more easily understood with visual aids to improve my understanding.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 48acfe26e0c3a7ef5874dd6d8e9d44c7

Response:

I would prefer the presentation way more. The abstract would possibly be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4c5f4660d178ca625bf0e4ac65a45b93

Response:

I would prefer the presentation because I feel like it went more into depth particularly in the results section of the experiment. I am more of a visual learner and the presentation provided more visuals for the results and data from the experiment. I would prefer the abstract to determine which was better designed because it went into more detail how the experiment was set up and what it was looking for.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 601b7a094af6f0e7c7b1cb4c1a3b6d06

Response:

I would prefer the presentation. It was easier to follow and is more fun to watch then to read the paper. I also think the video should be used for the only portion every time rather then the paper.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 68f184e3ef063823e58e65b6a031d37a

Response:

i think reading the abstract is easier to do and takes less time, but for the sake of information i think the presentation is better. this is because it included a lot more data and visuals and went more in depth with the information.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7075a95e8a1252332e7c6f5a5969aa8d

Response:

I would want to hear about it through only the presentation. It gives various visuals as well as explains the information verbally, which is easier to digest. However, the description of the experiment design is a little more detailed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 75116a2736bd3a95127c9796c6972f72

Response:

I would've preferred the presentation, as I felt that way you got a much better understanding of what went into it and showed the effort put in making it appear more well designed to me.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7803bbceaf7d2d4d73fcf1257c871e38

Response:

If I had to choose between hearing about this study using only the extended abstract or only the presentation, I would prefer the extended abstract. The extended abstract typically provides more detailed information about the study's methodology, variables, findings. For determining whether the experiment was well-designed, the extended abstract would be better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8b823d89b4fd6f3e0d521b7510c8f4a2

Response:

I would prefer to hear about the study through the presentation. Although the abstract is best for examining the data and details of the experiment design, the presentation provides a more realistic view on the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9677fa4d90dde6cdc846f5811e69e435

Response:

Like in the last question, I think that only the presentation would be helpful just because it tells us exactly what we need to know also with visuals to help us understand by seeing and also listening at the same time. I think with the extended abstract there could be too much information that could be misleading in ways or too overwhelming for the researcher and reader.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a05e70c5392202e9b5251f6f6af4a73e

Response:

If I had to choose between the extended abstract and the presentation alone, I would prefer the extended abstract for a comprehensive understanding of the study's design, methodology, and results. The extended abstract would be better for determining whether the experiment was well-designed because it provides a detailed written account of the study's framework, including variables, methods, and statistical analyses, allowing for a thorough evaluation of its scientific rigor.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a59daa8e577e10eb268d8e44e7e06cf1

Response:

I would like to hear about it from the presentation because it gives more specific details about the experiment. The abstract is just much broader, so it doesn't give as good of an idea to the reader as the presentation does.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a8f55e111c6a413ae660a5854a5c0332

Response:

I think both were important in getting a good grasp on the study. However, if I had to hear about the study, I would want to use the presentation. I found it easier to follow. For determining whether the experiment was well designed I would definitely choose the abstract. The components of a well-done study were explored more in depth and with more conciseness.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b72ef61def1a544fbbcdade2fe821941f

Response:

I would say the presentation, it provided visuals that I very much could understand by the average reader, not only that but by it being split up into parts made it very easy to follow and understand as well. While the abstract felt like information just thrown at me, making it very hard to get through and understand by the average reader.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: cab84ffaed08c3a91cbd775e2e4024c0

Response:

while the extended abstract is suitable for obtaining a quick overview of the study, the presentation offers a more comprehensive understanding and is better suited for assessing the design quality of the experiment. If the primary goal is to evaluate the experiment's design, attending the presentation would be the preferred option, as it provides a richer and more detailed analysis of the study's methodology and findings.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d6d29269327f8dcb872cb85ec56d46af

Response:

I would prefer to hear about it through the presentation. Presentations offer direct interaction, visual aids, and verbal explanations, which can help convey complex concepts more effectively and engage the participants (us) in a dynamic way. This allows for a deeper understanding of the research and its implications compared to reading an abstract alone. The extended abstract would be more suitable for determining whether the experiment was well-designed. The abstract summarizes the study's objectives, results, and conclusions. The extended abstract formally documents the study's design and is more thorough for methodological rigor.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fe8d6c41c2cd32e1e9eb710400c1eb26

Response:

If compelled to select, I would opt for the extended abstract, given its propensity to furnish a more exhaustive and intricate portrayal of the research endeavor. For evaluating the study's design efficacy, the extended abstract would prove superior, given its capacity to delve into the nuances of methodology, data analysis, and findings, surpassing the presentation's inclination towards succinct summarization and audience engagement.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 36cbfee4fc4590abab6d39d24305c89b

Response:

I would rather the abstract as the presentation was hard to sit through because of the cadence of the speaker's speech; far too slow and the rhythm was hard to listen to, pausing is random spots.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 60d3b9ffd98b3eae8dea9ffc41937291

Response:

I would prefer hearing about this study through the presentation. I like how much detail it provides, and I also like the visual aids included. For determining whether the experiment was well designed, I think the abstract is better.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9a70dec0845e7d09b30cc9ed12c83dfb

Response:

I would prefer the abstract. It better explained what the goal of the experiment was and why it was being done. The abstract helped me understand the experiment better, but that also could have been because I read that before the presentation. I prefer the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b5b58d981f452b431092dff3a4452c70

Response:

I would prefer the abstract, as the key points were laid out plainly and I could work through them myself. I think that overall, the presentation was better at determining whether the experiment was well designed because it went over the specifics of our experiment, and not just the overview of the original experiment and how it compared to the recreation. The presentation better explained the why in my opinion.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0f54a572fe247a38613948a0be003b73

Response:

I liked the presentation better because we got to see the results and what they could mean and it did a good job of showing how it was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 26b00321af938da722cf6e4b40e73ffc

Response:

The extended abstract would be the one I preferred to hear about the study because I have all the information, I need to complete the study and they why behind the study. I think the presentation would be better for determining if the experiment was well designed because it gives us the results and can show how much variation there is between peoples answers.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 755285252ba9b997ca795b6d3ec09c47

Response:

I would prefer the presentation. I think the presentation would've been better because it explained the main points and also gave a visual representation compared to the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7cefe835b511a3ad4dd05c71096633ac

Response:

the presentation is what i would prefer. i liked the combination of being able to listen and see the visuals instead of just reading it.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 93e19cfefcb81a8d2977c93f91d3d2f1

Response:

I would prefer the presentation. It goes into more depth and makes the study easier to understand.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a153db18dd84ea54178832c56e6f9aee

Response:

The presentation. This is because it explains the study more in depth.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a532f582947f59da1cb087a0983f75fa

Response:

Presentation. I feel like the presentation made so much more sense than the abstract. Not that the abstract didn't make sense, but the presentation was so easy to follow.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: ac08c79d3d0c19515a28422c79ac2937

Response:

I would prefer the presentation since it was made for the general public to understand. The abstract is more thorough and probably better for understanding the design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c7264d99b096d9400ee56b15da2fa356

Response:

The presentation is what I would prefer since I find it more engaging. The extended abstract would probably be better in determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fe628eb37eaa6df7f853159de23f728d

Response:

Personally, I would prefer the extended abstract. It summarizes everything very well and does not have a lot of hard to understand information. To determine whether the experiment was well designed though, the presentation would be much better since it has specific details and extensive background information on everything.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 047b800bd29b3b9060f8f8b7d50f6100

Response:

The presentation because I learned more than in the abstract. I think both indicate the design of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 059c808c5e1933e7477e09f11f7aea37

Response:

I would prefer the abstract to determine whether the experiment was well-designed. While the presentation conveyed the information more simply, the abstract contained greater detail about experimental design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 3bcb6648a60a09aba00c53adeb2761ea

Response:

I like the presentation better. I think someone telling you the design of the experiment and explaining it in more detail allowed me to see how well it was designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 59e3c7b5c6598fa6594cfe1299688fc0

Response:

I would go with the presentation, it brings all of the information together and makes it easy to understand.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 683a4bd7e9e4ebabf445d699200aea78

Response:

I would prefer the abstract. I think the abstract also would show the experiment was well designed since its laid all out right there and it was categorized making it easy to read.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7e56b559f4ab9f2e307d4738206f1209

Response:

I would rather use the presentation. the abstract might be better at determining if the experiment was designed well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7e66d96b1bb3ef84d2a7e53cb4a62968

Response:

I would prefer to hear about the study using the presentation because it is in depth enough that students would understand the experiment and its purpose. I think the extended abstract would be better to determine if the experiment was well designed because it can go more in depth and might not have a time limit which could leave out some information like in the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c0471c580545f17948ac92d5e2a98134

Response:

I would prefer the presentation over the abstract. The presentation was better for determining whether the experiment was well designed because it laid out all of the information, equations, and reasoning behind the experiment well.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e247bfe31031dd3be812fbb9b485d2ca

Response:

This presentation. It can give me more information about this research.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e614239fd20e5cc914132b2341c41cb7

Response:

I would prefer the presentation. This way I incorporate reading the information as well as being able to watch what the presenter wants to convey.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f3c8a94a7c6d56545cb9d06c13b8d450

Response:

The presentation made me feel more interested in the study and invested in it's goals, however the abstract is likely a better show of the study as it should be presented to participants and various other viewers in order to prevent introducing bias caused by too much inside information regarding how the efficacy of 3D graphics has been assessed in the past.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f4be2d5d01e76eee993ab34b29dbe3b0

Response:

I definitely like the extended abstract better, even though I thought it was not perfect. The most important thing this experience makes samples really put themselves in the program. It also give stronger abilities to collect data.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 0bf416b48ede82c1a8cf8611bbb92d39

Response:

Definitely the presentation. I watched the video, and I understood it way better because the researcher was a peer and easier to understand. And if I had watched the presentation in person, I could ask questions.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 42f24dda89b57b72a72f961b29eb4d24

Response:

I would rather hear about this study via the presentation. Hearing something told to me sticks in my brain better than reading something from a research paper. However, I do think that the abstract does a better job at explaining the experiment design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 550926119e0b1987cf38a1f7f49fad01

Response:

I would prefer the presentation, because I liked hearing the results more. For determining if the experiment was well designed, I believe it would be better to read the paper since it went into more detail over the experimental design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7fe20b2bf052ed5b487a782661a7e171

Response:

I would have rather only see the presentation. This is because the presentation is easier to follow through and watch rather than reading an abstract which looks at the experiment through a very scientific paper lens. People are more likely to watch a 12-minute video and take away key information than an abstract paper due to word choice and now people prefer learning through videos.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8aff4110996b03bee468869b20c2aaf2

Response:

The abstract shows a better design, but the actual participation/presentation of the study is more fun to partake in. Overall, this was an interesting study and I am glad I got to help with the data collection.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9afd6ea317ec0665fd257e9a77999ebb

Response:

I think that I would prefer the presentation since the information was more condensed and gave it to me in an understanding way. If I truly wanted to determine how the good the experiment was designed I would look more into the details of the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a0de45620a703e6a7c44ef272af0d21e

Response:

I would like to hear it from the presentation video. Not only seeing the graphics but having them explained was nice. I think he did a great job conducting the video and making it clear for the audience to understand.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e509f9b94849d6d939a789a3fd35547f

Response:

I would have preferred the abstract side of the study. Abstract seems to be the best option.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 08c2de4f4db97d2693c3904a3d8a70ce

Response:

I would prefer the presentation. It was very informative and helped me learn more about the project than I did before. The extended abstract may be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2a4f7abbd200502a4f0f48640c465161

Response:

I would prefer the 3D one.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 2ab53412a53219eec5604eb35c55e465

Response:

The extended abstract is more clear so it is more preferred. The extended abstract was better for understanding the quality of the design. It added more context as to why certain details were added.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4122bc6dc8c01a4d33f248b59b3ebc23

Response:

I don't know what the extended abstract is.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 48dea0d5a74325fc18fb023152718be1

Response:

I would prefer the extended abstract. Not only was the goal of the study easy to identify, the study design and process was talked about in great detail.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4bf12454009f6d57be33eae39ba5e8ae

Response:

The extended abstract would be better. The presentation does a good job of explaining but students would be better at determining after going through the process themselves via the extended abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 51706f05e7485d32d223bbc38446fc3e

Response:

I liked the presentation, it was easier to understand and I got a lot more information out of it. For determining whether the experiment was well designed I think both played a part but maybe the abstract was better. It's hard to tell for me.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 6f2aefff301028d16fde1374b5aed4a

Response:

I would have preferred the presentation since it showed visuals and it was talked about how the kits looked like which the abstract did not. I think whether the experiment was well designed an abstract would have been better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 7f92c867c8d2fe483029ef350962a56a

Response:

Probably the extended abstract because it provides more for me. The presentation would be better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 89183271729db4e8721c64b1316a2e68

Response:

I think that the abstract is better because it excludes information that might change what you think and affect your results. By leaving out information this gives us better results overall and creates little bias in the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b07f341fa309c04daaaaf9530af1380d

Response:

I would prefer to hear about this from the presentation. I have a difficult time reading abstracts of studies as I have a hard time reading through them. The information presented in them, to me at least, seems to jump back and forth and I get lost. The video allows me to grasp the information exactly as the presenter intended.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: cfc344ea5a8b462c12606211b9b81fcb

Response:

I would prefer the presentation as it was more clear and emphasized the important information with visual aids and explanations

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: d87ad39dfec4ce291588bae3068834d4

Response:

only the presentation because it was designed a lot better and people could see it as a bar chart that was done right.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 115b664e2c0ba8eec8e7e6defabfa84c

Response:

The presentation is much more detailed and gives a broader explanation of the intention and design of the experiment. The presentation would be much more informative for determining the quality of the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 20e743ea26a8e051b71e4f0384e7689b

Response:

I would prefer the presentation if I was to hear about the study, because it has more visual elements and is an easier to comprehend slide by slide. And for determining experimental design, I would also use the presentation because it goes more in dept about the experimental design in the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 4db3ae675d7b76423a87beb3e81fe201

Response:

I would prefer the presentation because it gives you all of the behind the scenes as well as in depth details about the experiment. I also think the presentation is better for determining whether the experiment was well deigned or not. It breaks down every component of the study, all while giving a reasoning for why everything was done the way it was. I think the more descriptive something is the better is would be to determine the greatness of the experiment design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 59250d895b703662aaf045a14637b5ca

Response:

I would prefer the presentation and it would be better for determining whether the experiment was well designed or not, it is well laid out and easy to follow along.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 86fda3adf9d4d83053b371948c2862f5

Response:

I would prefer the presentation because it was well explained and the instruction was clear, also the design is well design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 883fd95abac1aece8097e474723b8ec

Response:

I feel the presentation did a better job of giving a good overview of the project. It seemed to be a lot cleaner and a fluent description of the project.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 95f50fc26a70e5c39a654c14790dc7ff

Response:

I would prefer the presentation. Reading the abstract makes it harder to understand the study design, and seeing the visuals of the information in the presentation really helped.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 974e315502a42b3217aecb19c35ab9ca

Response:

I would prefer the presentation. I think that it was easier to understand than the abstract. It also helped to have animations on the slides and to have things broken down into simple parts. I think that the abstract would be better for determining if the experiment was well designed because the abstract was much more thorough than the presentation.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 9e0ddc5d4fd3d0bd31f327486def9aec

Response:

I think I would prefer the abstract because I can read through it. I found the video pretty boring.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: af26f8f9bc960a882ebd0de542315c53

Response:

The presentation would be better. It explained the study much better than just the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: c17154d2d94f9a2ba6fe486001d04176

Response:

I would prefer hearing it via the presentation. I believe it is much more accessible. But i think the abstract would be better for the design.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: efa137acce86e6cb7df5192a89ea6750

Response:

I would prefer only the presentation because I can focus better with audio and with slides than by reading an abstract. Although, I feel that the abstract serves better to determine whether the experiment was well designed because it has more specific information about the experiment.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 17f948d0f150d4c9199894bcf037a9e8

Response:

I would prefer to hear about the study using both the extended abstract and the presentation. However, if I had to choose one, I would prefer the extended abstract for determining whether the experiment was well designed. The extended abstract provides a comprehensive overview of the study, including details about the research question, methodology, results, and conclusions. It allows for a thorough evaluation of the study's design. On the other hand, the presentation may provide additional insights through visual aids and verbal explanations, but it may not capture all the nuances of the study design as effectively as the extended abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 52f7da0a0b666cebc4c8f0da0e92eeaf

Response:

I would prefer the abstract. I found there studies to be much more interesting.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 537e21de6182a6b06a23293c1d482bf6

Response:

Since I am a person who better understands videos and a person talks himself, I would prefer video presentation. It makes some things easier to understand than abstract. I would say video to determine whether the experiment was well designed because it was more detailed than the abstract.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 65dd892c30359f52b52e1f654b0b39ae

Response:

If I had to choose between hearing about the study using only the extended abstract or only the presentation, I would prefer the extended abstract. The abstract would provide a detailed and structured overview of the research question, methodology, results, and conclusions, allowing for a comprehensive understanding of the study's design and findings. While the presentation may offer visual engagement and dynamic communication, the abstract would likely be better suited for determining whether the experiment was well-designed due to its ability to convey detailed information in a written format.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8695e8dd2fd92b6dc38e68cb4e5366

Response:

Presentation would be my preference. I think this way is better in obtaining a comprehensive understanding of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: 8d419f99f33e7cc161c4dedc330a3039

Response:

I prefer only the presentation because I feel like I can learn better from it. Also, I can understanding well when presentation beause it explain stuff clear to understanding.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: a38bb0b40f1db4528353ff3c202ea02e

Response:

The presentation. It is easier to understand regarding the experiments design and purpose.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: b85101979b2fe06cfe8cff783a9e794e

Response:

Given the extended abstract and this presentation, I would definitely prefer the abstract. I'm not saying this to be mean but the engagement of the presentation was lacking and I lost interest almost immediately. That being said, I do think it provided a lot more in-depth details regarding the design of the study.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: bcc1c25f0d46bbb3ca724625c73eb609

Response:

I would prefer the presentation because it gives you more information about the experiment and what it entails.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: e162f37a0d2f1a18b5cc79e2b693c079

Response:

If I had heard about this study I would have prefer using the extended abstract. Even though the presentation had more details about the experiment I enjoy reading and the abstract had the information that I needed to understant the purpose of the experiemnt faster.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: f740c57c1086f8dbe1b02fbe45502a1d

Response:

While both the extended abstract and the presentation offer valuable insights, I would prefer the extended abstract for a comprehensive understanding of the study's design and findings. The abstract typically provides more detailed information about the research methodology, results, and implications, allowing for a thorough evaluation of the experiment's design

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fbf936b384c0d1b53d23930f90f8a98b

Response:

While both the extended abstract and the presentation communicate research findings, the presentation may be preferred for the way it can engage the evidence, while the extended abstract may be better for a detailed examination of the study's design and methodology.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation

ID: fd518adcd5c36120a274efd435059183

Response:

I would prefer the presentation because it offers much more information. I think the presentation is better for determining whether the experiment was well designed.

Preference:

☐ Prefer Abstract ☐ Prefer Presentation

Better for Evaluating Design:

☐ Abstract ☐ Presentation
